

Topic: Implement lifecycle policies to move objects from S3 to glacier

1.Create a new S3 bucket named 'my-zomato-images' and upload at least 3 sample image files representing restaurant menu items.

Ans-Step 1. Open Amazon S3

Click Create bucket.

Step 2. Configure the bucket

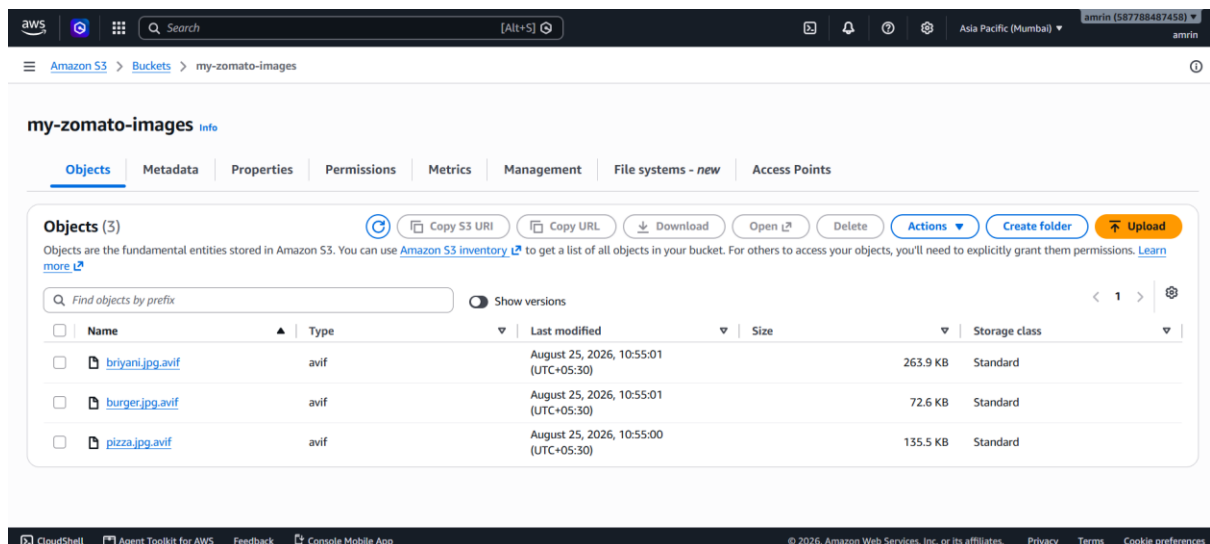

Enter: Bucket name: my-zomato-images

Step 3. Upload 3 images

Open:

S3 → Buckets → my-zomato-images → Objects

Click Upload → Add files.

**2. Set up a lifecycle policy on your 'my-zomato-images' S3 bucket to automatically transition all objects older than 30 days to the Glacier storage class.

Hint: Use the S3 Management Console's 'Lifecycle rules' section to define the transition action.**

Ans-

Step 1. Open Lifecycle Rules

Go to: S3 → my-zomato-images → Management

Find: Lifecycle rules

Click: Create lifecycle rule

Step 2. Give the rule a name

Enter: MoveImagesToGlacierAfter30Days

Step 3. Choose the scope

Select:

Apply to all objects in the bucket

Step 4. Configure transition

Find: Lifecycle rule actions

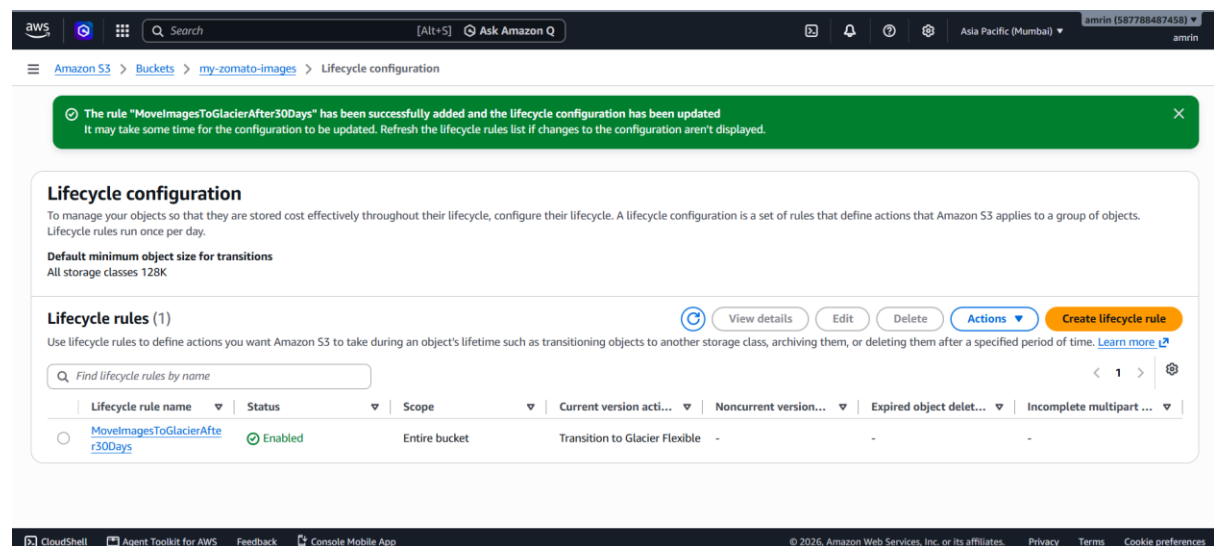

Select: Move current versions of objects between storage classes

Then configure: Days after object creation: 30

Storage class: Glacier Flexible Retrieval

Step 5. Create the rule

Click: Create rule

3. Simulate a cost optimization scenario: calculate and compare the estimated monthly storage cost for keeping 5GB of images in S3 Standard versus S3 Glacier using AWS Pricing Calculator.
Hint: Use the AWS Pricing Calculator website and note down the difference in INR.

Ans-

Step 1. Open AWS Pricing Calculator

Search Google for: AWS Pricing Calculator S3

Open the official AWS Pricing Calculator.

Step 2. Create an estimate

Choose:

Create estimate → Amazon S3

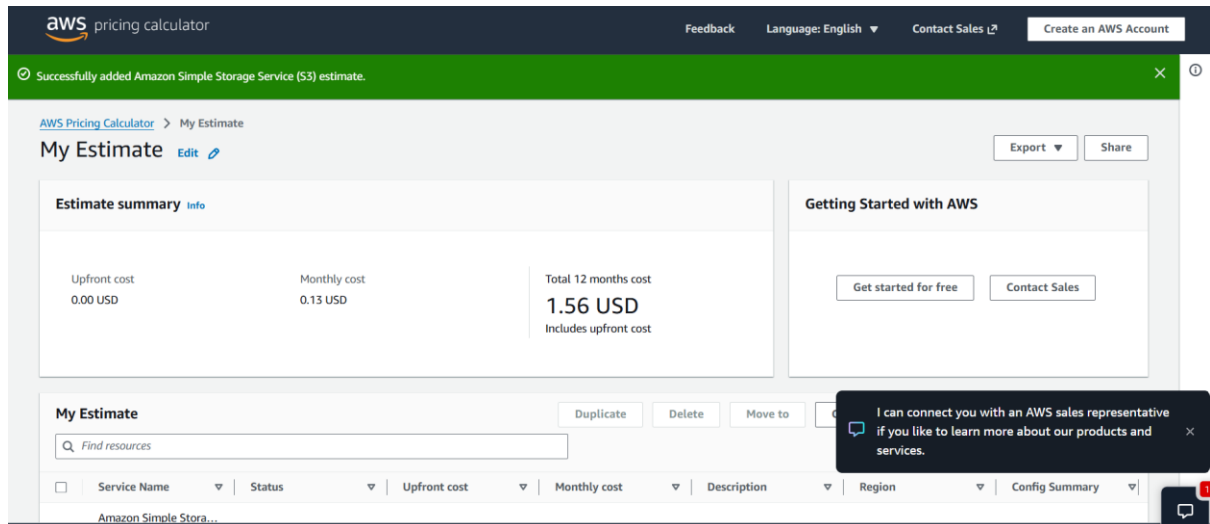

Select the appropriate S3 service configuration.

Step 3. Enter storage amount

For the simulation, use:

Storage: 5 GB

Create one estimate for: S3 Standard

4. Add a new rule to your S3 bucket's lifecycle policy so that any objects with the prefix 'offers/' (e.g., 'offers/summer2024.jpg') are deleted automatically after 60 days.

Ans-

Step 1. Go to Lifecycle Rules

Open: S3 → my-zomato-images → Management → Lifecycle rules

Click: Create lifecycle rule

Step 2. Rule name

Enter:

DeleteOffersAfter60Days

Step 3. Choose rule scope

Choose:

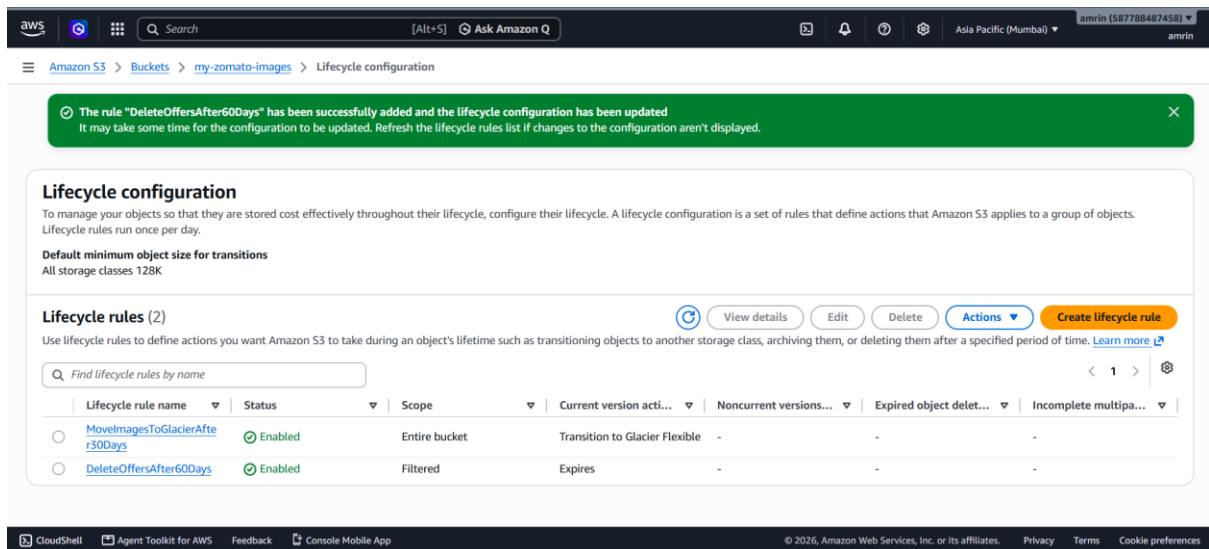

Limit the scope to specific prefixes or tags

Select/use:

Prefix

Enter: offers/

Step 4. Configure expiration

5. Use ChatGPT to generate a sample JSON configuration for an S3 lifecycle policy that transitions files to Glacier after 15 days and deletes them after 180 days. Paste the generated JSON and briefly explain each section.

Ans-

Step 1— Use this JSON

```
{
  "Rules": [
    {
      "ID": "MoveToGlacierAfter15DaysAndDeleteAfter180Days",
      "Status": "Enabled",
      "Filter": {},
      "Transitions": [
        {
          "Days": 15,
          "StorageClass": "GLACIER"
        }
      ],
      "Expiration": {
        "Days": 180
      }
    }
  ]
}
```

```
}
```

Step 2— Understand each line

- "Rules"

```
"Rules": [...]
```

```
"ID"
```

```
"ID": "MoveToGlacierAfter15DaysAndDeleteAfter180Days"
```

- "Status"

```
"Status": "Enabled"
```

This means the lifecycle rule is active.

- "Filter"

```
"Filter": {}
```

This means the rule applies to all objects in the bucket.

- "Transitions"

```
"Transitions": [
```

```
{
```

```
  "Days": 15,
```

```
  "StorageClass": "GLACIER"
```

```
}
```

```
]
```

When an object becomes 15 days old, move it to Glacier.

- "Expiration"

```
"Expiration": {
```

```
  "Days": 180
```

```
}
```
